

SEPTEMBER 24, 2015 DIGITAL DENTISTRY AND THE NEW DIGITAL WORKFLOW

Presentation By: Ed Zak

The future of dentistry is now! The advent of digital dentistry has evolved from impression taking to CAD-CAM produced restorations! Does “digital dentistry” — represent the high-tech, easy-to-implement solutions that were imagined and written about 10, 15 or 30 years ago or even last year?

The purpose of this seminar is to examine the concept of digital dentistry, the digital “workflow”, its advantages and limitations, and share with you observations on specific areas of restorative dentistry based on research, direct personal experience, and communication with dental manufacturers, clinicians and laboratories. It is intended to provide a practical view on the latest in dental materials, their indications/contra-indications, as well as options and the latest digital techniques covering: patient expectations, shade taking, and proper cement/bonding of these materials.

It is an exciting time to be in our profession as more technologies are being introduced that make dentistry easier, faster, better, and — most important — enjoyable!

About the Speaker: Ed Zak is a graduate of Niagara University. For over 25 years, Ed has dedicated himself to the dental industry in both laboratory and clinical applications. He has worked for dental market leaders like Jelenko, Heraeus Kulzer, X-Rite and Henry Schein Dental. Ed is currently the Key Account Manager for Ivoclar Vivadent, and has held this position for the past six years. He has also been published in numerous dental publications.

Ed has lectured for the A.D.A., N.A.D.L., F.N.D.C., F.D.L.A., Seattle Study Group and numerous other dental organizations.
